Micron, Inc.

## Micron, Inc. Joins FemTech Community Japan as a Corporate Member

Micron, Inc. (hereafter, 'Micron,' headquartered in Tokyo) aims to be a leading company in imaging research, focusing on early detection and diagnosis. In recent years, the development of SaMD and SiMD using AI and other digital technologies has been thriving internationally, and Micron fully supports their implementation from development to marketing. Micron actively supports several areas, including Oncology, Neurology, Rehabilitation and Exercise Therapy, and FemTech (Women's Health Technology).

As part of its commitment to Women's Health Technology, Micron has joined FemTech Community Japan as a corporate member starting April 2025.

'FemTech' is a term derived from 'Female' and 'Technology,' referring to technological solutions aimed at improving women's health issues. The sector encompasses a wide range of products and services, including menstrual health, pregnancy and maternity care, sexual health, and general healthcare for women. Addressing women's specific health issues is expected to improve their quality of life, help them balance work and family, and promote their advancement in society by enabling them to maximize their potential in the workplace.

FemTech has made significant progress internationally, with many start-ups receiving government support and successfully raising funds. Meanwhile, in Japan, the government and local authorities are beginning to focus on promoting FemTech. The Ministry of Economy, Trade and Industry (METI) is promoting initiatives to support the health and continued employment of working women through the FemTech Support Service Demonstration Project Subsidy. The Tokyo Metropolitan Government and other local authorities are also taking measures, such as offering incentive programs for companies introducing FemTech and subsidizing the cost of egg freezing for individuals.

Micron, specializing in assisting foreign start-ups entering the Japanese market, aims to contribute to this field by introducing high-quality medical equipment and services to Japan, addressing the health challenges faced by Japanese women.
